Impact & sustainability

Higher · Impact · Worksheet

D&M WITH MR KELLY

Name _____ Class _____ Date _____

By the end of this worksheet I can…

- ☐ describe how design and manufacturing technologies have changed the workforce
- ☐ describe the impact on the supply of products and society
- ☐ describe the impact on energy use and pollution
- ☐ describe methods to support sustainability (6 Rs)
- ☐ describe how to design for recyclability and reuse, and efficient use of materials
- ☐ investigate a product's sustainability and its impact on the environment

I DO — Worked example

Read how a full-mark answer is built

1 Describe four steps designers could take to make products more sustainable. (4 marks)

Full-mark answer each ✓ is one mark

Label each plastic part with its recycling code so it can be sorted ✓. Use screws rather than glue so the product can be taken apart at the end of its life ✓. Make parts such as batteries replaceable so the product lasts longer ✓. Use less material and less packaging ✓.

Why answers lose marks

"Use recycled materials and make it in a factory with solar panels."

0–1 mark: in some years recycled materials were given in the question, and points about the factory do not answer "designers".

WE DO — Guided practice

Use the starters and word bank to help you

2 Describe the impact of mass manufacturing on the workforce. (2 marks)

Sentence starters

One … is …, which means …

Another … is …, so …

Word bank

traditional · CAD · replace · manual · needed · jobs · machines · workers

Tip: 2 marks = 2 separate, developed points.

YOU DO **On your own** No notes. Check your answers afterwards.

3 Quick check: tick one box for each.

a) Which is a negative impact of automation on the workforce?
☐ More CAD jobs ☐ Loss of traditional craft skills and fewer jobs ☐ Safer working ☐ Higher accuracy

b) Sourcing materials locally mainly reduces...
☐ Transport pollution ☐ Product aesthetics ☐ Strength ☐ Branding

c) Designing a product to be fixed easily, extending its life, is which R?
☐ Reduce ☐ Refuse ☐ Repair ☐ Rethink

d) Which design decision best supports recycling?
☐ Gluing different plastics together ☐ Using one material and labelling it ☐ Adding chrome plating ☐ Using composites

4 Key terms: write the letter of the matching description next to each term.

1. **Sustainability**	____	**A** Using resources responsibly so future generations can still meet their needs.
2. **The 6 Rs**	____	**B** Sustainable/local materials, less transport, less energy, less waste.
3. **Clean manufacturing**	____	**C** Fewer jobs and loss of traditional skills; demand for CAD and maintenance skills.
4. **Impact of automation on workforce**	____	**D** Nothing goes to waste; products are reused, repaired or returned.
5. **Circular economy**	____	**E** Reduce, Rethink, Refuse, Recycle, Reuse, Repair.
6. **Design for recyclability**	____	**F** Single materials, labelled parts, easy disassembly.

5 Describe how automated production could affect the workforce and society. (4 marks)

6 Describe steps designers and manufacturers could take to reduce the negative environmental impact of products. (4 marks)

7 Describe how environmental concerns have influenced the design, manufacture, use and disposal of products. (8 marks)

Check and reflect

Mark your answers with the answer sheet. Go back to the checklist on the site and re-rate each “I can” statement above. Which one still needs work?
