- ☐ compare raster and vector graphics and their file types
- ☐ explain cloud computing and storage, file management and digital rights management

I DO — Worked example

Read how a full-mark answer is built

A web page uses JPG photographs and an SVG logo.

1 Explain one advantage of a raster format for the photographs and one advantage of a vector format for the logo. (2 marks)

Full-mark answer each ✓ is one mark

Raster images are made of pixels that can each be a different colour, so the photographs show realistic detail and subtle colour changes ✓. The vector logo is made of paths, so it can be enlarged to any size without pixelating ✓.

Why marks are not awarded

"JPGs are good for photos and SVGs are good for logos."

0 marks: no reason is given for either.
