Case study 7: Plant stand

National 5 · Practical Woodworking · Answers and marking guidance

Award one mark per correct point unless stated. Other valid answers should be credited. Sketches can gain full marks if they show enough detail.

1 (a) Name the method of turning used for the top. (1 mark)

- Faceplate turning

1 (b) Describe how the wood is held for this method. (1 mark)

- Screwed to a faceplate fitted on the headstock

2 Name two turning tools and describe what each is used for. (2 marks)

- Roughing gouge: turns the square blank round
- Parting tool: cuts grooves to diameter / parts off
- Skew chisel: smooths the cylinder
- Spindle gouge: shapes beads and coves

Any 2 points.

3 Describe how to drill the hole to an accurate depth on the pillar drill. (2 marks)

- Clamp the base in a machine vice or to the table
- Set the depth stop to the required depth, then drill with the correct size bit

4 Name a suitable finish and explain why it suits the plant stand. (2 marks)

- Polyurethane varnish
- It forms a tough waterproof film, so spilt water won't mark or swell the wood

5 Describe one environmental benefit of using offcuts for the base. (2 marks)

- Less timber is wasted
- So fewer trees need to be felled / less waste goes to landfill

Total: 10 marks
